Customer Survey
Rate your RM on 1-5 scale
Was your issue resolved within SLA window?
Yes or no
Comments field

RM Survey
Rate your Engineer on a 1-5 scale?
Rate the customer on 1-5 scale?
Comments Field

CSAT defaults to 5 star rating
3 or 4
questions max with free form text field for comments

Documentation will support billing and will be provided at incident conclusion as part of receipt

Documentation stored in Incident Database cross referenced by customer/skills used

Templates determined by:
Skills associated to incident
Document sent within the application to customer profile/account

11.7
Customer Survey completion closes out engagement and triggers invoice generation

11.6
Documentation used to validate actions and provided as invoicing "back up"

11.5
RM delivers written report every 30 minutes to the client

Team starts troubleshooting

11.4
Custom URL (Desktop Sharing Application) is generated and provided to the customer and assembled engineers

Home Grown VoIP platform with visual control functions similar to any desktop sharing application

Issue is presented to ALL individuals logged into the system for review. RM or Eng can select to work the issue to be added to the potential pool

Presence (XMPP):
Synopsis goes out as an alert to all available resources

Budget dependent on offering selected by customer

Database: algorithm to choose "best available" engineers based on skill ratings

Signed on Engineers' skill ratings are aggregated into a 1-5 rated number

Cisco Switch/Router aggregate of logged in Engineers: 3.4

VMWare aggregate of logged in Engineers: 2.7

Juniper Router aggregate of logged in Engineers: 4.2

11.0
Resource Management Flow

11.1
Resource Manager logged into system

11.2
Resource Manager Logged into Application

Resource Manager "greyed out" in Customer view

Issue is presented to ALL individuals logged into the system for review. RM or Eng can select to work the issue to be added to the potential pool

Presence (XMPP):
Synopsis goes out as an alert to all available resources

Database: algorithm to choose "best available" Resource Manager and present to customer

11.2
Resource Manager selected by customer

Customer gets another choice "Resource Manager is unavailable"

Customer chooses SLA and provides synopsis of issue (see Fig 1.4)

11.3
RM chooses Engineer(s) based on budget

Back end:
RM selects team based on "best available" signed on Engineers

After Team selection

Budget dependent on offering selected by customer

Database: algorithm to choose "best available" engineers based on skill ratings

Signed on Engineers' skill ratings are aggregated into a 1-5 rated number

Cisco Switch/Router aggregate of logged in Engineers: 3.4

VMWare aggregate of logged in Engineers: 2.7

Juniper Router aggregate of logged in Engineers: 4.2

Home Grown VoIP platform with visual control functions similar to any desktop sharing application

Future: Automatically generated custom URL and phone solution
